Aerial

Face

When installing the Latch Intercom, it is important that the position of the intercom meets the local accessibility standards in your area. This guide is intended to provide simple installation examples based on guidance from the American Disabilities Act. For the most up-to-date requirements and/or specific requirements that may be required at your site, please review the ADA or equivalent local guidelines before installing at your site.

For Latch Camera, we recommend mounting in the aerial or face positions depending on the amount of space you have or whether you desire a close-up of a visitor's face or a broader picture of the visitor.
